globe, including teams in Engineering like Common Hardware Group, Network Product Eng, Infrastructure & Security. You will be an essential contributor to the development of next-generation innovations in operating systems, firmware, networking stacks, and security infrastructure. Working on these teams, you will gain hands-on experience with hardware-software integration and low-level networking technologies that power Cisco's critical products. Discover the possibilities when deep technical expertise meets creativity and help build solutions that transform how the world connects and communicates.

Your Impact

You are a passionate engineer skilled in low-level programming, networking protocols, and hardware-software integration, with strong communication and collaboration abilities. You thrive in solving complex challenges through innovation and precision, while being highly organized and process-driven. Your work develops and maintains critical software and tools that ensure hardware compatibility, network performance, and security for Cisco's core products like operating systems, firmware, and networking stacks. By effectively managing your time and streamlining processes, you deliver high-quality solutions that embed resilience and efficiency into global communications infrastructure, directly contributing to Cisco's leadership in trusted, scalable networking technologies.

Minimum Qualifications

- Completion within the past 3 years, or enrollment with expected completion w months, of a certification or degree program (e.g. Associates, Apprenticeship, Boot Camp, Certification in a specialized program + 3 years of relevant experience, High School Diploma + 4 years of relevant experience, Bachelors + 2 years of relevant experience) or Masters + 0 years of
