Security Engineer II, Uppercase Research

Google

Austin, TX, USA

Early

Apply

Minimum qualifications:

- Bachelor's degree or equivalent practical experience.
- 1 year of coding experience in one or more general purpose languages.
- 1 year of experience with security assessments or security design reviews or threat modeling.
- Experience with security engineering, computer and network security, and security protocols.

Preferred qualifications:

- Experience in security research, detection engineering, or adjacent work.
- Experience with signals development, threat hunting, and threat modeling on cloud data sources.
- Experience with security analysis tooling, including cloud audit logs and Security Information and Event Management (SIEM).

About the job

Our Security team works to create and maintain the safest operating environment for Google's users and developers. Security Engineers work with network equipment and actively monitor our systems for attacks and intrusions. In this role, you will also work with software engineers to proactively identify and fix security flaws and vulnerabilities.
