Google

Hyderabad, Telangana, India

Early

[Apply](#)

Minimum qualifications:

- Bachelor's degree or equivalent practical experience.
- 1 years of experience in responding to security alerts and incidents.
- Experience in identity management, or operating systems such as Chrome OS, Linux, etc.
- Experience programming in Go, Python, C/C++, or Java.

Preferred qualifications:

- Experience in a security-oriented role or in server operations.
- Experience with monitoring, security measurement, and security observability.
- Knowledge of OS internals and platform security.

About the job

Security is at the core of Google's design and development process: it is built into the DNA of our products. The same is true of our offices. You're an expert who shares our seriousness about security and our commitment to confidentiality. You'll collaborate with our Facilities Management team to create innovative security strategies, investigate breaches and create risk assessment plans for the future. You believe that providing effective security doesn't come at the expense of customer service - you will be our bodyguard (and our long lost pal).
