Data and AI Intern

Chicago, New York, Illinois, New York, North Carolina, United States

Internship

Apply now

Introduction

IBM's WW Data and AI technical and sales team is the connective tissue that preserves data integrity, trust, and quality across the Data Pipeline, allowing clients to deploy AI with confidence.

As a Sales Intern, you'll work alongside our technical and sales teams in some key areas: data analysis, client engagement, and sales operations. You'll gain exposure to the data challenges that enterprises face and learn how cutting-edge technologies are positioned and sold to global clients.

Your role and responsibilities

- Assist in data gathering and analysis.
- Support the development of tailored sales presentations and technical demos.
- Conduct research trends, competitors, and messaging.
- Analyze CRM systems (e.g., Salesforce), Social Media, and competitive prospectuses against product roadmaps, identifying areas to optimize and reimagine.
- Collaborate with marketing and product teams to assess ways to disrupt and provide new lines of thinking from current product messaging.
- Analyze sales performance metrics and contribute insights to improve outreach.

Required education

Required technical and professional expertise

- Currently pursuing a degree in Business, Marketing, Computer Science, or a related field.
- Interest in Data and AI
- Strong communication and analytical skills.
- Strong digital marketing skills.
- Ability to grasp technical concepts and translate them into business value.
- Self-driven, curious, and eager to learn in a fast-paced environment.

Preferred technical and professional experience

- Currently pursuing a degree in Business, Marketing, Computer Science, or a related field.
- Interest in Data and AI
- Strong communication and analytical skills.
- Strong digital marketing skills.
- Ability to grasp technical concepts and translate them into business value.
- Self-driven, curious, and eager to learn in a fast-paced environment.

ABOUT BUSINESS UNIT

IBM has a global presence, operating in more than 175 countries with a broad-based geographic distribution of revenue. The company's Global Markets organization is a strategic sales business unit that manages IBM's global footprint, working closely with dedicated country-based operating units to serve clients locally. These country teams have client relationship managers who lead integrated teams of consultants, solution specialists and delivery professionals to enable clients' growth and innovation. By complementing local expertise with global experience and digital capabilities, IBM builds deep and broad-based client relationships. This local management focus fosters speed in supporting clients, addressing new markets and making investments in emerging opportunities. Additionally, the Global Markets organization serves clients with expertise in their industry as well as through the products and services that IBM and partners supply. IBM is also expanding its reach to new and existing clients through digital marketplaces.
