Introduction

At IBM, work is more than a job - it's a calling: To build. To design. To code. To consult. To think along with clients and sell. To make markets. To invent. To collaborate. Not just to do something better, but to attempt things you've never thought possible. Are you ready to lead in this new era of technology and solve some of the world's most challenging problems? If so, let's talk

Your role and responsibilities

IBM has openings for Software Engineers, Computer Scientists and Computer Engineers to develop applications, operating systems, performance management and AI enablement for the IBM Power brand of enterprise computer systems.

As a Developer at IBM, you'll get to work on the systems that are driving the quantum revolution and the AI era. Join our team of creators - the people who help move IBM forward by using their imagination to envision solutions, their curiosity to experiment with new ideas, and their ever-growing skills into action for customers to make better decisions with greater speed on the most trusted platforms in today's market.

Required education

Required technical and professional expertise

- * Programming Language knowledge: C++, C, Java, Golang, Ruby, Python, SQL
- * Linux application development / systems programming
- * Data structures/Algorithms/Software Design
- * Excellent communications skills / documentation skills
- * Strong verbal and written communication skills.
- * Passion for technology and engineering
- * Growth-minded, trusted, team focused, courageous, resourceful, and outcome focused.

Preferred technical and professional experience

- * Experience in JSON, Web Services
- * Understanding of virtualization concepts
- * Understanding of LLMs
- * Understanding of Cloud Computing technologies
- * Git (preferred) or other source control systems
- * Contributing to open-source project experience
- * Python (ideal) or other scripting languages
- * Familiarity with AI and Machine Learning frameworks
- * Software test / unit test development in the context of software development

ABOUT BUSINESS UNIT

IBM Systems helps IT leaders think differently about their infrastructure. IBM servers and storage are no longer inanimate - they can understand, reason, and learn so our clients can innovate while avoiding IT issues. Our systems power the world's most important industries and our clients are the architects of the future. Join us to help build our leading-edge technology portfolio designed for cognitive business and optimized for cloud computing.

YOUR LIFE @ IBM
