Introduction

At IBM, work is more than a job - it's a calling: To build. To design. To code. To consult. To think along with clients and sell. To make markets. To invent. To collaborate. Not just to do something better, but to attempt things you've never thought possible. Are you ready to lead in this new era of technology and solve some of the world's most challenging problems? If so, let's talk

Your role and responsibilities

As a Site Reliability Engineer Intern at IBM, you'll get to work on the systems that are driving the quantum revolution and the AI era. Join our team of creators - the people who help move IBM forward by using their imagination to envision solutions, their curiosity to experiment with new ideas, and their ever-growing skills into action for customers to make better decisions with greater speed on the most trusted platforms in today's market.

IBM has an opening for Site Reliability Engineer Intern to join our team and help build highly reliable, scalable, and efficient systems. In this role, you will collaborate with development and operations teams to design, implement, and maintain infrastructure that supports mission-critical applications. This is an excellent opportunity for someone with foundational experience who is eager to grow in the SRE discipline. SRE Engineers participate in various aspects of the life cycle, test, and support process, such as:

Contribute to documentation and process improvements for system reliability.

* Learn and apply best practices in observability, performance tuning, and capacity planning.

Required education

High School Diploma/GED

Preferred education

Bachelor's Degree

Required technical and professional expertise

Currently pursuing a degree in Computer Science, Engineering, or related field.

Basic understanding of Linux/Unix systems and networking concepts.

Familiarity with at least one programming language (Python, Go, or similar).

Strong problem-solving skills and eagerness to learn.

Preferred technical and professional experience

Exposure to containerization (Docker, Kubernetes).

Experience with CI/CD tools (Jenkins, GitHub Actions).

Understanding of monitoring tools (Prometheus, Grafana).

ABOUT BUSINESS UNIT

IBM Systems helps IT leaders think differently about their infrastructure. IBM servers and storage are no longer inanimate - they can understand, reason, and learn so our clients can innovate while avoiding IT issues. Our systems power the world's most important industries and our clients are the architects of the future. Join us to help build our leading-edge technology portfolio designed for cognitive business and optimized for cloud computing.

YOUR LIFE @ IBM

In a world where technology never stands still, we understand that, dedication to our clients success, innovation that matters, and trust and personal responsibility in all our relationships, lives
